MIRA BED

The “Mira” bed is a model that embodies simplicity of form, functionality, and refinement.

The headboard is not just a support element — it’s a meticulously designed feature that defines the overall character of the bed.

It consists of two independent soft panels visually united into a smooth, flowing silhouette. Their slightly rounded vertical edges add a sense of softness and comfort while maintaining geometric precision.

The division into two symmetrical parts is an elegant design choice that creates a balance between visual lightness and optical stability.

FRANKOF

MIRA BED

The headboard is tilted at a comfortable angle of about 104° relative to the seat plane.

This is the ideal ergonomic angle that allows you to sit comfortably in bed while reading a book, working on a laptop, or simply relaxing — reducing strain on your back and neck.

The structure is supported by slim yet sturdy black metal legs that visually “lift” the bed, giving it a light and airy appearance.

Thanks to this design, the bed doesn't overwhelm the interior and fits seamlessly even into compact spaces.
