

RINO KIDS BED

The distinctive feature of the Rino bed is the voluminous geometry of its base, headboard, and side panel. Deep vertical stitching running around the entire perimeter creates expressive soft shapes. The consistent design language of all elements forms a cohesive and harmonious appearance.

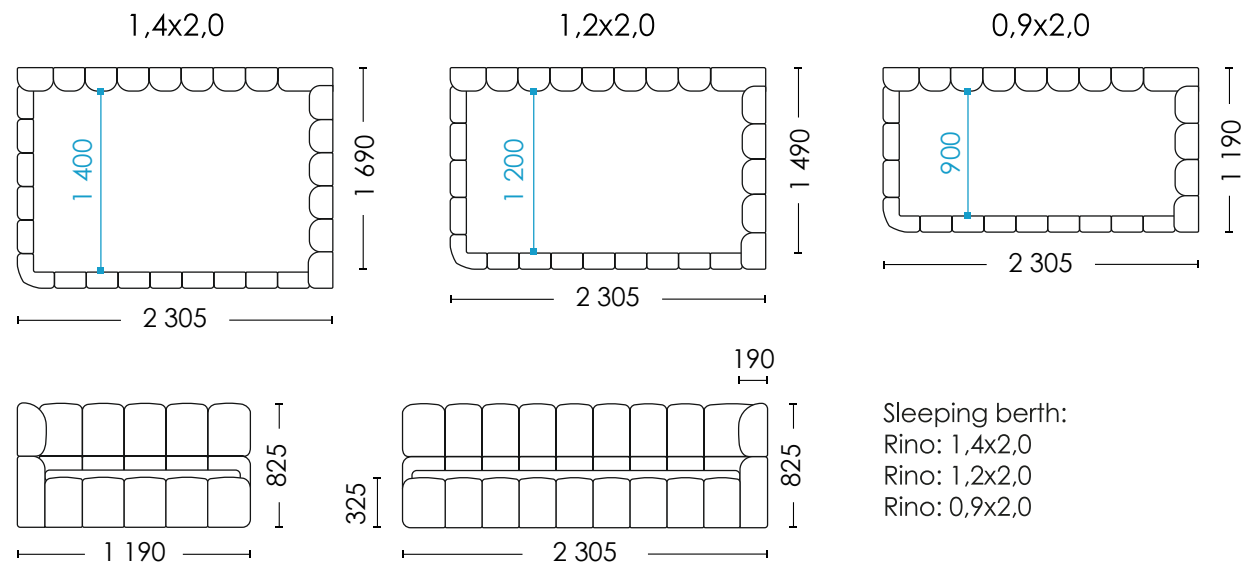

RINO KIDS BED

The high headboards and side panel are designed with safety and comfort in mind. They create a cozy space for relaxation, protect against contact with a cold wall, and provide additional support while reading, studying, or watching favorite cartoons.

RINO KIDS BED

The model is equipped with a spacious storage compartment for bedding, blankets, pillows, or children's belongings, helping to keep the room organized.

A reliable gas-lift mechanism ensures easy access to the storage space and convenient everyday use.

At the core of the **Rino** sleeping area is a metal frame with beechwood slats. Thanks to their flexibility, the slats distribute weight evenly and enhance the orthopedic properties of the mattress, contributing to comfortable rest and healthy sleep.

RINO

Inside the Rino bed is a durable and reliable frame made from a combination of E1-grade particleboard, softwood timber, and HDF fiberboard. Comfort is provided by polyurethane foam, a soft yet resilient material. Rino is available in several sleeping dimensions, ranging from 90 × 200 cm to 140 × 200 cm.

FRANKOF offers a choice of over 1,000 upholstery samples, from delicate pastel shades to bold accent colors. Available options include both soft, smooth textures and fabrics with a distinctive woven structure, allowing you to create the perfect bed design to complement any children's room interior
